Abstract of JP57125656

PURPOSE: To prepare a hollow snack having a light taste, by using a dough ingredient obtained by blending a starch raw material having low swelling ability with one having high swelling ability, followed by gelatinizing the blend partially. CONSTITUTION: 80-95pts.wt. starch raw material such as nonglutinous kind grains having low swelling ability is blended with 40-5pts.wt. starch raw material such as potatoes, glutinous kind grains, etc., hot water or steam is added to the blend, which is made at 65-90 deg.C, and kept at this temperature for 2-10min, so that the starch is partially gelatinized, to give a dough ingredient. This dough ingredient is shaped into a sheet with uniform thickness of 0.8-3mm., stamped out or cut into an arbitrary shape such as animals, etc., and baked.
